

DrägerPac® 7000

Now sold in Australia
through Bracton Industries NSW

“Small and robust, ergonomic and intuitive, economic and powerful. The DrägerPac 7000 is tailor-made for personal monitoring in the workplace... The detector offers a high level of reliability and rapid warning against harmful concentrations of gases such as: CO, CO₂, CL₂, HCN, H₂S, NH₃, NO₂, O₂, PH₃, SO₂” – Dräger Safety

DrägerPac 7000 was purpose built as a compact and robust instrument to meet industrial standards.

The impact resistant housing features a protective rubber coating, is optimised for protection against electromagnetic effects and is resistant to corrosive substances.

The simple LCD continuously displays the currently measured harmful gas concentration, notice and warning functions. In addition, the respective peak concentration, average concentration (TWA value) and short term exposure limit (STEL) relating to the measurement periods are all accessible.

State of the art technology: DrägerPac 7000 boasts the latest in sensor technology. Major advances in diffusion paths and electrochemical reaction times mean that gas hazards are displayed immediately. Sensor positioning allows optimum exposure to conditions and minimises the danger of the gas inlet being accidentally covered.

In conjunction with a vibration alarm, a visual and audible alarm warns if thresholds are exceeded (or if oxygen levels fall below the set value). For optimum perception of sound a two-tone alarm is used.
