

February 24, 1997

Bracton Industries,
PO Box 386,
Brookvale,
NSW, 2100.

TO WHOM IT MAY CONCERN

Bracton Twin, Bracton DP1/DP2, and Bracton Low pH DP1 used alone, or in combination with Bracton DP2, have been assessed by Carlton and United Breweries (CUB) and are approved for use as beer line detergents in ambient or cold situations.

Please note, however, that CUB has not undertaken (and is not in a position to undertake) any detailed analysis or testing of these materials. Therefore, each person proposing to use these materials must satisfy themselves that they are suitable for their purposes and use them at their own risk.

CUB also recommends weekly cleaning with a minimum contact time of 2 hours, under conditions of soft water and light soil. In the presence of either hard water and/or heavily soiling, cleaning at double strength is recommended.

CUB may be quoted as being satisfied that the products meet the standards desirable in any product used to clean beer dispensing equipment and NOT as having recommended the use of the products. CUB also reserves the right to withdraw this approval at any time.
