Speedy Glass

Affordable  
Solution  
beer + wine  
glasses

## Luxury Rapid Clean Edition

The Speedy Glass Cleaner & Water Control System (SGC system) is the latest in glass cleaning technology. By means of fast counter rotating brushes the SGC system fully ensures that glasses are clean. Lipstick, scale and debris is quickly and easily removed from both the inside and outside of the glass.

- Automatic starts when hand passes sensor
- Actively reduces labour costs
- Significantly increases beverage glass quality and hygiene
- Compatible with brewery approved Bracton Pink & Glasswash detergents

### Sustainability

The slow start of the counter rotating brushes ensures that the brushes do not wear out quickly. The power consumption of the SGC is up to 80 Watt.

### Easy clean

The SGC is easy to clean from both the inside and the outside. The motor housing can be disconnected from the body of the system and is easy to clean in a glass or dish washer.

- Place in sink
- Water proof
- Low voltage
- Automatic sensor on/off
- Supplied with a detergent dispenser
- Exchangeable brushes
- 2 year warranty \*Excludes brushes, detergent holders.

### HIGH-PERFORMANCE GLASS WASHING AND AUTOMATIC GLASS SOAKING

The Bracton range of commercial glass washers are specifically designed to make your glass washing process as simple as possible, while providing the cleanest glassware in the industry. We believe the only thing you should see on a Bracton cleaned glass are the scratches.

The Bracton range of glass washers use less water, electricity and chemicals saving your venue more money with every cycle.

Our calculations reveal the average hotel selling 10 kegs of beer per week can **save a total of between \$808 and \$1538 on water, electricity, carbon and labour** by switching from a traditional glasswasher to an efficient Bracton model. This equates to an approximate saving of between 3 and 6 cents per litre of beer sold.

Arguably the most advanced machines available to the Australian hospitality industry. Bracton has worked hard to integrate many parts used in traditional machines, effectively reducing the number of moving parts thus greatly increasing reliability over the competition. In addition we have introduced an intelligent curved filtration systems, low voltage splash proof touch pads, stainless rinse tanks and brass solenoids.

→ Many venues have eliminated much of the labour intensive hand glass soaking procedures in favour for the clever soak cycle approach integrated into every Bracton commercial glass washing machine.

→ This approach eliminates wastage of chemical, time and labour while delivering consistent results - made possible with the introduction of top and bottom wash arms, giving the ability to achieve a total clean both inside and out.

→ With less moving parts, the Bracton glass washer is one of the most reliable machine in the market.
