## *Lubrication of bar guns on commissioning*

### WHY LUBRICATE ON COMMISSIONING?

While all bar guns are wet tested prior to leaving the factory, the lubrication may dry over time when the guns are not in use.

Bracton recommends applying liquid silicone lubricant 200/350cst on commissioning to stem o'rings to ensure best performance.

### HOW TO LUBRICATE STEM O'RINGS?

1. Remove button plate, butterfly plates and o'ring retainer.
2. Place a drop of silicone liquid #FA1997 on each stem o'ring.
3. Replace retainer, butterfly plates and button plate. Tip: don't over tighten butterfly plates.
